BIOBLAST

DOSING GUIDELINES – EATOILS™ BIOBLAST™ LIQUID SHAKE WELL BEFORE EACH USE

SIZE	EXAMPLE	NOTES	DOSING
GREASE TRAPS (Pumping 3 X/year is a lot)			
Small Volume	Diners, Luncheonettes	200 gal trap (29 cu. ft.)	10 oz. per day
Medium Volume Establishment	McDonalds, Burger Kings	500 - 1,500 gal trap (65-200 cu. ft.)	18 – 20 oz. per day
Large Volume	Hotels, Hospitals	1,500 gal + (200 + cu. ft.)	32 – 40 oz. per day

DRAIN LINES

Residential Slow Running	Start-up	When water is still in sink/tub	10 - 12 oz.
Residential Less Severe Probs	3 day treatment	Dose at bed time for best results	2 - 4 oz. per day
Hotel Rooms Slow Running	Start-up	When water is still in sink/tub	16 - 20 oz.
Hotel Rooms Less Severe Problems	3 day treatment	Dose when least occupied	4 - 6 oz. per day
Hotel Rooms Maintenance	Everyday/Ongoing	Dose after cleaning room each time	4 oz. per day
Hospital x-ray lab	Everyday/Ongoing	Maintenance	2 - 4 oz. daily

SEPTIC TANKS

Residential	Avg. 1,000 gal. Tank	Pour down toilet & flush	10 oz. per month
Commercial	1,000 + gal. Tank	Pour down kitchen sink	16+ oz. per week

SURFACE CLEANER/GROUT CLEANER/ODOR CONTROL

Residential	Bath tiles, floors, diaper pails, garbage pails, animal areas	Spray and wipe surfaces, rinse as necessary.	2 - 4 oz. per gal of water DO NOT RINSE
Residential	Trash/garbage collection, dog pens, concrete areas, tile & grout, floor surfaces	Spray, let sit on tough areas, scrub if necessary, and rinse as needed.	5 - 8 oz. per gallon water DO NOT RINSE
Commercial	Subways, public restrooms, tile & grout, kennel runs, loading docks	Spray and wipe surfaces; rinse or hose down as necessary	5 - 8 oz. per gallon of water DO NOT RINSE
Commercial	Dumpsters, trash chutes, containment & garbage areas	Spray as necessary; let air dry.	Use full strength or dilute as needed DO NOT RINSE

SURFACE CLEANER/MOLD & MILDEW CONTROL

(FOR LONG TERM EFFECT FIND & ELIMINATE SOURCES OF MOISTURE)

Residential & Commercial	Bath tiles, floors, walls, ductwork – all surfaces	Spray, brush, wait 15-20 minutes, and wipe surfaces, do not rinse - let air dry.	Dilute at 2:1 – 10:1 (2 - 10 parts water to 1 part product)
--------------------------	--	--	---

PORTABLE TOILETS/HOLDING TANKS

Portable Toilets	Porta-Johns, RVs, Marine Holding Tanks	Recharge once per week rates, or more if required.	4 - 6 oz. per every 5 gallons of water
------------------	--	--	--

BIOBLAST

EATOILS™ BIOBLAST™ - FREQUENTLY ASKED QUESTIONS

HOW LONG DOES IT TAKE TO GET MY WASHROOM AND KITCHEN AREA CLEAN & ODOR FREE?

Grease & food particles that build-up on floors and in the grout between the tiles can take years to develop. Removing the odor will take 2-4 applications. Brightening the grout and returning it to its original color using biochemical cleaning action with EATOILS™ BIOBLAST™ will take 5-8 weeks of daily cleaning using the product at 2 oz. per gallon. All you need to do is mop your floor with our product as you would normally and leave it in a wet state – **no rinsing!** – you want to allow the microbes to continue to work on the food particles – **they keep on working long after you're done!**

For faster results, scrub the floor and grout (using EATOILS™ BIOBLAST™ in the same concentration) on a weekly basis until the discoloring condition is gone. The grout will come back to its original color much faster this way.

WHAT HAPPENS TO THE ODOR PROBLEM?

When you use EATOILS™ BIOBLAST™ to clean and deodorize an area you are inoculating the area with microbes that attack the sources of odors and destroy them deep down in the pores of the floor and grout within minutes. Our microbes actually destroy the tiniest food particles on surfaces and in the pores of tiles and grout so that the other, odor causing bacteria don't have a chance to get started on the food. When the food is gone, the area is truly clean until new food is introduced. Other products tend to mask odors and consequently they have a limited effect on the sources of odor.

WHAT IS DIFFERENT ABOUT THIS PRODUCT? HOW CAN I TELL THAT IT'S WORKING?

Most chemical cleaners rely on either VOC's (volatile organic compounds – solvents, etc.) or strong chemicals to do the cleaning – once you finish wiping the floor they are finished! While they are initially good at cleaning in the first few dips of the mop, by the time you have covered a small area, you are actually putting grease and dirt back on the floor every time you dip your mop in the solution. The technology in our EATOILS™ biochemical cleaning products is revolutionary. Unlike chemical cleaners that are finished as soon as they hit the floor, our EATOILS™ products actually just get started when they are put on your floors. With EATOILS™ products you are actually inoculating the surface with beneficial microbes every time you put your mop on the floor. These microbes will eat all food materials on the floor and remove the greasy, smelly conditions that you now have. We have tested the major cleaners on the market, and we have found that 3 out of 4 of our major competitors actually add grease and dirt to the floor as a net result of cleaning the floor. EATOILS™ BIOBLAST™ removes most of the grease & dirt on the floor – **JUST BY MOPPING THE FLOOR** – then our product starts to work to remove the residual grease & food particles from out of the pores of the tiles and grout. As long as there is food material on the surface, our microbes will keep on working long after you're done to clean your floor.

A simple test of how well our product works is this – at the end of your cleaning shift with your current product, lift your mop and smell it – it will probably smell of mold and mildew as the bacteria from the floor are on your mop and eating your mop head. Now smell the mop from our product - the mop head will smell clean and when you rinse it, it will come clean, your mop heads will last longer, and your cleaner will go a long way – **usually up to twice as far as the competition.** Are you mixing 6 gallons of cleaner and throwing away 3-4 gallons at the end of the job? With our product you can mix up 3 gallons (**you have just saved ½ of the cost of our product**), clean your floors and pour your left over waste water down your slowest moving drain – the microbes will clean the drain & keep it running freely! How's that for getting the most out of your product? BIOBLAST™ can also be used as a daily treatment in your grease trap to digest excess greases, fats, & oils that can build up in your system – regular use will reduce the need for pump-outs (by up to 5 times!) and minimize odours and blockages.

HOW DO THE MICROBES IN THE PRODUCT WORK? THIS SEEMS LIKE MAGIC WHERE DOES THE GREASE GO?

When the microbes come in contact with food, they secrete a series of enzymes that digest the food breaking it down into harmless invisible gasses (hydrogen, oxygen, water vapor) and carbon. The microbes eat the carbon and breathe it out as carbon dioxide - another harmless invisible gas. In a nutshell here's the magic: you start with an ugly, smelly mess – a smelly washroom, dirty floor, etc., after using our EATOILS™ BIOBLAST™ the odor is gone, the grout starts to return to its original color and you have replaced it with: 1) invisible, harmless gasses and 2) beneficial microbes that keep on working long after you're done to keep the floor & tiles safe and clean.
