## DOSING GUIDELINES – SUPERFLOW<sup>TM</sup> LIQUID SHAKE WELL BEFORE EACH USE

SIZE	EXAMPLE	NOTES	DOSING		

DRAIN LINES						
Residential Slow Running, clogged	Start-up	When water is still in sink/tub	Liquid: 10-12 oz.			
Residential Less	3 day treatment	Dose at bed time for best	Liquid: 2-4 oz. per			
Severe Problems		results	day			
Residential Toilets	3 day treatment	Avoid re-flushing 6-8 hrs.	Liquid: 4-6 oz. per			
		after flushing product	day			
		down toilet for best results	-			
Hotel Rooms Slow	Start-up	When water is still in	Liquid: 16-20 oz.			
Running,		sink/tub				
clogged						
Hotel Rooms Less	3 day treatment	Dose when least occupied	Liquid: 4-6 oz. per			
Severe Problems			day			
(Sinks or toilets)						
Hotel Rooms	Everyday/Ongoing	Dose after cleaning room	Liquid: 4 oz. per			
Maintenance		each time	day			
Hospital x-ray lab	Everyday/Ongoing	Maintenance	Liquid: 2-4 oz.			
			daily			

## DRAIN LINES

## **GRAVITY MAINS AND FEED LINES**

4-6" diameter line	Dose every 1,000 feet	Start-up: <sup>3</sup> ⁄ <sub>4</sub> gallon daily	Maintain: ¼ gal		
			twice per week		
8-12" diameter line	"	Start-up: 1 gallon daily	Maintain: <sup>3</sup> ⁄4 gal		
			twice per week		
14-18" diameter line	"	Start-up: 1-1/2 gallons	Maintain: 1-1/2 gal		
		daily	twice per wk		

**NOTE: THIS PRODUCT IS ONLY CAPABLE OF DIGESTING ORGANIC MATERIAL** (GREASE, OIL, FOOD, SKIN, SOAP, ETC.). IF YOU FOLLOW THE 3 DAY TREATMENT AND SEE NO DRAMATIC RESULTS OR ODORS PERSIST, YOU PROBABLY HAVE A DIFFERENT TYPE OF BLOCKAGE(TREE ROOT, OR OTHER SOLID MATERIAL) OR A CRACKED PIPE AND YOU WILL NEED TO 'SNAKE' THE DRAIN AND/OR CALL THE PLUMBER.

ALSO USEFUL IN MACHINERY DRAIN LINES – AIR CONDITIONER DRAIN LINES, HIGH EFFICIENCY FURNACE CONDENSATE & DRAIN LINES

HELPS TO CONTROL PESTS (FRUIT FLIES AND OTHER PESTS) IN FLOOR DRAINS.

## EATOILS<sup>™</sup> SUPERFLOW<sup>™</sup> - FREQUENTLY ASKED QUESTIONS

### HOW LONG DOES IT TAKE TO GET MY SLOW MOVING DRAINS CLEAN & ODOR FREE?

Organic matter, grease & food particles that build-up in your drains can develop quickly, slow down your drains and cause odors. Depending on the type and volume of organic matter that you are processing and the cleaning chemicals you use in your facility, the speed of the organic and grease eating process can vary. For best results, we suggest that you start using our EATOILS<sup>™</sup> SUPERFLOW<sup>™</sup> in your slowest moving drains – starting at the one closest to the municipal outflow. If you follow this plan, you will see immediate results. Other chemicals like dishwashing detergent, most cleaning chemicals, and bleach can have an adverse effect on the flow in your drains - and the microbes in our product. The best approach to using our products is to add them to the drains after the last person uses the toilet at night – this allows the microbes to work uninterrupted through the night time hours, eating the fats, oils, and grease that build up in the system – *they keep on working long after you're done!* Most clients see dramatic results after day one of the three day treatment, however, we strongly suggest that you complete the three day treatment to ensure that all organic matter is removed. For further information please refer to the DOSING GUIDELINES for SUPERFLOW<sup>™</sup> available from your EATOILS<sup>™</sup> distributor.

For the best results, replace your harsh cleaning chemicals with biologically friendly cleaners like our EATOILS<sup>™</sup> BIOBLAST<sup>™</sup>, SUPERFRESH<sup>™</sup> or SUPER FLOOR DEGREASER<sup>™</sup> - then both your drains and your whole facility will be environmentally safe and GREEN.

#### HOW DOES SUPERFLOW™ DEAL WITH ODOR PROBLEMS?

When you use EATOILS<sup>™</sup> SUPERFLOW<sup>™</sup> in your drain system you are inoculating the area with microbes that attack the sources of odors and begin to destroy them within minutes. Our microbes actually destroy the tiniest food particles so that the other, odor causing bacteria don't have a chance to get started on the food. Other products tend to mask odors and consequently they have a limited effect on the sources of odor. In addition, our microbes break the bond between the wall of the pipe and the organic matter, creating a clear, free-running drainage system.

### WHAT IS DIFFERENT ABOUT THIS PRODUCT? HOW CAN I TELL THAT IT IS WORKING?

Most chemical and enzyme-only treatments rely on either VOC's (volatile organic compounds – solvents, etc.) or strong chemicals or enzymes to do the work – while they are initially good at cleaning the drain, chemicals only have a short term effect. Enzymes alone only break down the grease – they don't digest it, causing problems further down the drain line (sometimes in less than 5 feet).

The technology in our EATOILS<sup>™</sup> biochemical products is revolutionary. Unlike chemical treatments and enzymeonly products that are finished as soon as they hit the drain, our EATOILS<sup>™</sup> products actually just get started when they are put in the drain. With EATOILS<sup>™</sup> SUPERFLOW<sup>™</sup> you are actually inoculating the drain line with millions of beneficial microbes every time you pour them down the drain. These microbes will eat all fats, oils, greases, and other food material in the line – breaking down and removing the bond that forms on the walls of your drain lines. This process keeps the lines running efficiently much longer than alternative methods. Most clients who use our SUPERFLOW<sup>™</sup> in their drain lines see a major reduction in the number and frequency of calls to plumbers - plus you have less possibility of blockages and foul odors backing up into the system. In many municipalities regulators are promoting the use of "GREEN PRODUCTS" like our SUPERFLOW<sup>™</sup> in larger commercial buildings and apartments.

### HOW DO THE MICROBES IN THE PRODUCT WORK? THIS SEEMS LIKE MAGIC WHERE DOES THE GREASE GO?

When the unique blend of microbes in EATOILS<sup>™</sup> SUPERFLOW<sup>™</sup> come in contact with fats, oils, grease and other food they secrete a series of targeted enzymes that attack the food breaking it down into harmless invisible gasses (hydrogen, oxygen, water vapor) and carbon. The microbes then eat the carbon and breathe it out as carbon dioxide - another harmless invisible gas. This is an ongoing process and the microbes will continue working until they are disturbed – *they keep on working long after you're done!* 

In a nutshell here's the magic: you start with an ugly, smelly mess – a smelly, slow moving (or blocked) drain, full of grease, fats, oils, and food from your cooking, washing and drain waste - after using our EATOILS<sup>™</sup> SUPERFLOW<sup>™</sup> the odor is gone, the grease, fats and oils are minimized - and you have replaced them with: 1) invisible, harmless gasses and 2) beneficial microbes that keep on working long after you're done to keep the lines clean.
